Education

Software Engineering, *Semicolon africa* Lagos State, Nigeria

I Learnt programming fundamentals, including data structures and clean coding, while gaining insight into software design, system architecture, and best pratice for scalable, maintainable solutions

Projects

LeakSense, *Gas detector system*

We built an embedded device that could sense LPG gas levels in our surrounding and give a numerical reading display utilizing tools like ESP8266(Arduino) and MQ2 gas sensor majorly .
we also built a frontend mobile android app with react native and expo frame work where users can download in their mobile device to view the readings of the device and also see notification from the device when it's triggered by excess LPG in the environment
users can also from the app set in their email and the receiver email where notification can drop in case the user if far off from the device

Electronic Attendance System, *E-Attendance*

The E-Attendance system as we called it, was a system I built the backend with my friend working on the fronend that could allow admin which could be in school settings school authority teachers to register the names of the student or attendees and create a sheet where each student can check in for each day and the sheet will be submitted and saved in the database for that day

Skills

Software Engineering

I'm a proficient programmer with Innovative ideas and collaborative skills as well as a drive for continuous learning and self improvement

Courses

Design Thinking, *Semicolon*

I also attended the 2month design thinking and criticalthinking where I learnt how to go about starting a project and the methodologies to follow when carring out your reseach in order to build a solution that human centered and also desirable to the outside world

Idustrial Design, *Semicolon africa*

The course really thounght me all I needed to know about designs,the importance, the power, the effect of good desing on our producen and how the design of a product could cause a drastic change in the way the user view and rate the product. This course was really an eye opener for me and I'm glad I took it

Interests

Building Electronics gadgets
I love invention of electronic gadgets especially now that I'm a software engineer I intend on using my software engineering skill to build device and gadget that will be life changing and that will impact in my community

Gospel Music Lover
I Love Listening to gosple musics during my work space because it keeps me flowing and alive, it's this bad that I even do put on some calm soleam music when I'm about to sleep

Movies and Anime Lover
I love watching Animated movies during my leature hours of the day or during my break periods just for the fun of it
